JoyCon Instructions and guide

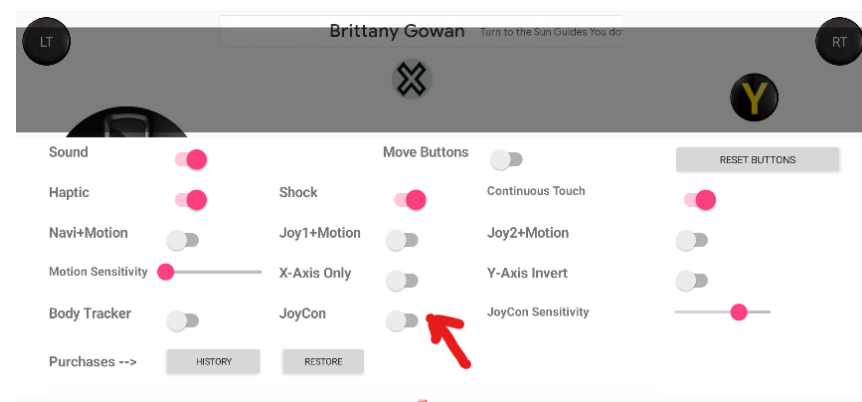

On your phone

Make sure controller is connected.

Switch to PS emulator first:

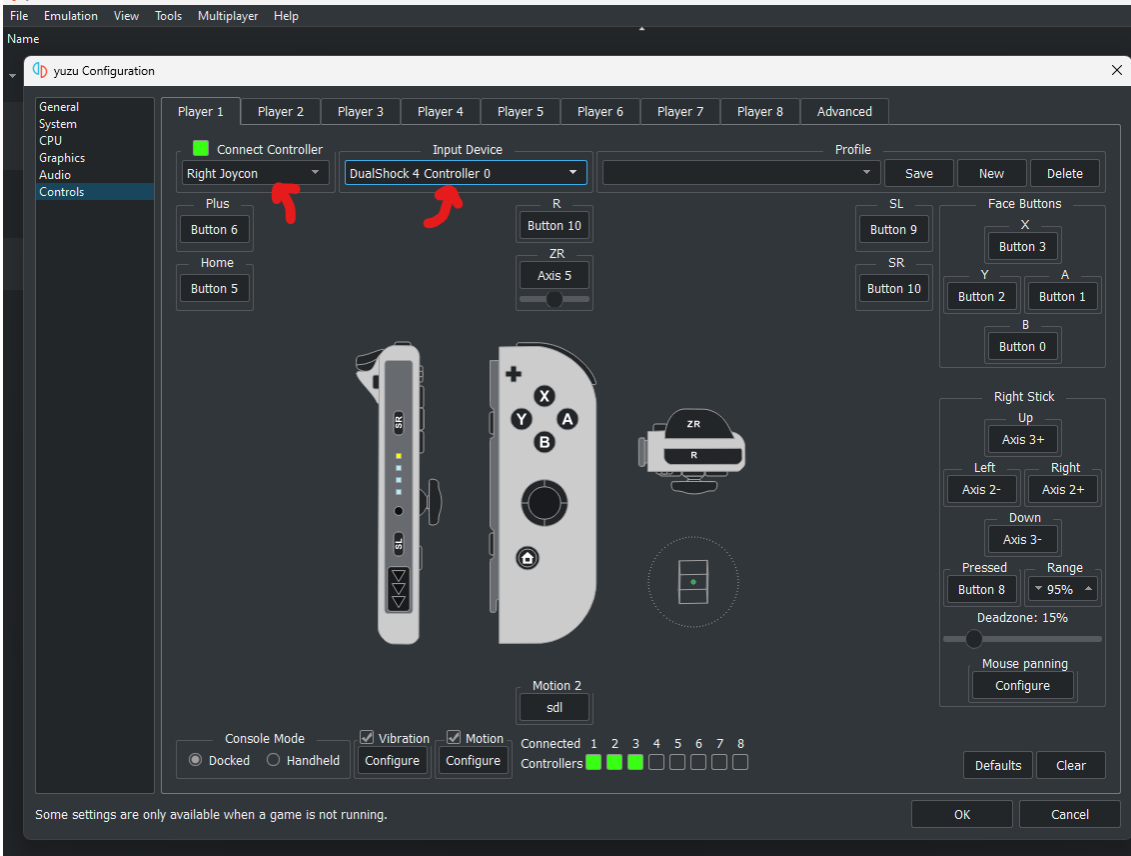

Turn on the JoyCon switch: (This switch goes off automatically on each app restart)

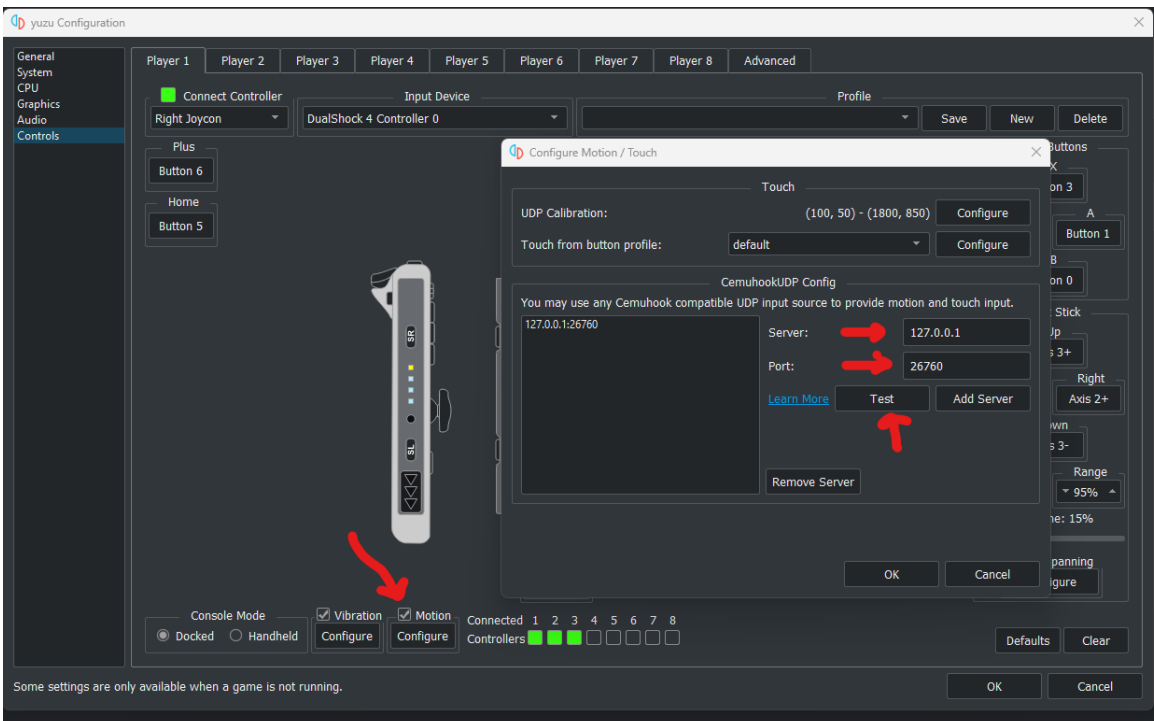

On your PC

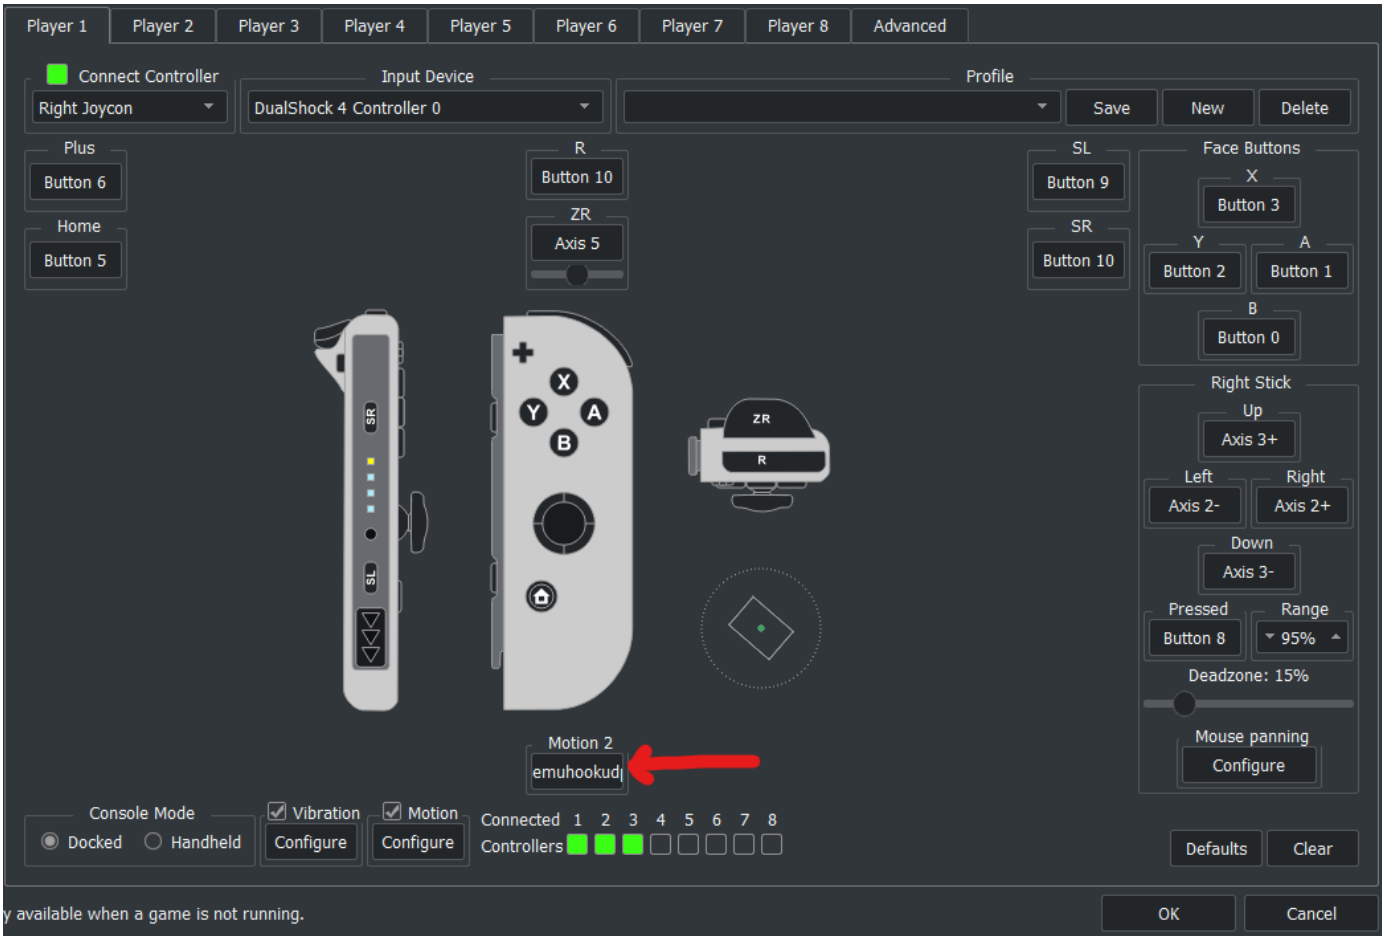

Run Yuzu emulator and hit Emulation tab and open up configure window, then select Controls. Make sure you set the Connect Controller and Input Device:

Hit Configure Under Motion and make sure the server config is as shown in the picture, hit Test to test the connection.

Hit Motion button and shake your phone, it should change to cemuhook as you shake the phone:

You are done, enjoy!

Repeat this for more controllers as you connect. You can connect up to 8 controllers simultaneously.
